

Changes made in MainActivity class

```
public void showFrag1() { //initial code didn't accounted for case f1
== null; ft.show(f1) would crash if f1 no longer exists
    FragmentTransaction ft = fm.beginTransaction (); //Create a
reference to a fragment transaction.
    ft.replace(R.id.FragLayout, f1);
    ft.commit ();

}

    public void showFrag2() {
        FragmentTransaction ft = fm.beginTransaction (); //Create a
reference to a fragment transaction and start the transaction.
        ft.replace(R.id.FragLayout, f2);
        ft.commit();

    }

    public void showFrag3() { //if all f1,f2,f3 were null, detach()/
attach() wouldn't work as these fragments no longer managed by
fragment manager and we can't call on them
        FragmentTransaction ft = fm.beginTransaction ();
        ft.replace(R.id.FragLayout, f3);
        ft.commit();
    }
}
```
